

# Incompatible COVID-19 Convalescent Plasma (CCP) Policy

Currently, the nationwide demand for CCP is outpacing its availability. Due to this, and the critical severity required for COVID-19 patients to be eligible for CCP, LifeServe Blood Center will be providing type-A, low titer anti-B CCP for type-B and type-AB patients if a compatible type is not available. This is common practice in traumas and has been shown to have no impact on morbidity or mortality.

If you would prefer to NOT have type-A, low titer anti-B CCP for your type-B or type-AB patient, please let us know. This may result in a delay in your patient receiving CCP.
